

Application Serial No. 10/594,174
Supplemental Response to Office Action dated February 18, 2009

PATENT
Docket: CU-5102

REMARKS

The Examiner indicated that a Supplemental Amendment would be acceptable, and therefore, the Applicant has provided one herewith. In the Office Action the pending claims 7-16 are pending, claim 16 is withdrawn, and claims 7-15 are rejected. The Applicant has amended the claims. No new matter has been added. The Applicant believes that this amendment to the claims overcomes the rejections or the rejections are traversed by argument below.

In the claims, please cancel claims 7-16 and newly add claims 17-22. The amendments to the claims are fully supported by the original disclosure. For instance, new claim 17 is supported by previously presented claim 7 and also by previously presented claim 8. New claim 18 is supported by the previously presented claims 7 and 9, and also Figures 2A-2D and the specification on page 41, lines 19-24. Support for the reference to ultraviolet ray or visible light in claims 17 and 18 can be found in the original disclosure on page 20 lines 1-6, page 33 line 24 to page 34 line 4, and Example 1 on page 59, lines 14-25. These claims do not, therefore, introduce new matter. Claim 19 is supported by previously filed claim 11, claim 20 by claim 12, 21 by claim 14, and claim 22 by claim 15. These amendments are made for clarity. The amendments to the claims can be viewed in the Amendments section of this paper in the Listing of claims beginning on page 4.

As discussed with the Examiner on October 13, 2009, these claim amendments are allowable. The Examiner encouraged the Applicant to point out with particularity, support for the limitation in claim 18 wherein the photocatalyst is located in between the light shielding layer and the cell adhesive layer. The Applicant respectfully draws the Examiner's attention to Figures 2A-2D and the disclosure in the specification on page 41, lines 19-24. Page 41 provides that the patterning substrate may be formed wherein the light shielding portion is formed on the base material, the light shielding portion is covered by the photocatalyst containing layer, and the cell adhesive layer is formed on the photocatalyst containing layer. The disclosure clearly recites that the photocatyst

layer separates the cell adhesive layer from the light shielding layer. This is also illustrated by the Figures 2A-2D. Therefore, the Applicant submits that this limitation is fully supported by the original disclosure.

The response to the rejections was made in the previously submitted response dated August 17, 2009, and has not been repeated herein.

CONCLUSIONS

The Applicant respectfully contends that all conditions of patentability are met in the pending claims. The Applicant respectfully submits that this application should be in condition for allowance and respectfully requests favorable consideration.

Respectfully Submitted,

Zareefa B. Flener, Pat. Reg. No. 52,896
